**DEPARTMENT OF
BIOCHEMISTRY**

1. **Dr. B.Varalakshmi, Dr. T.Karpagam, Dr. A.Shanmugapriya, Dr. V.Suganya, Ms. S.Revathi**, “ Vaginitis phyto therapy against vaginal pathogen and molecular identification of isolated vaginal pathogen, Journal of Medical Pharmaceutical and Allied Sciences, www.jmpas.com , UGC Care list, Google Scholar, Impact Factor : 0.30, ISSN 2320-7418, Volume 12, Issue 2,4056, March – April 2023, Page No.5762-5767.

Abstract:

Female genital tract infections are major public health problems, with considerable economic consequences. Drugs like metronidazole and clindamycin are unable to control the growth of vaginal infection completely, which requires alternate novel treatment strategies. Some herbal antimicrobial agents are reported to inhibit the growth of vaginal infection. Boerhaavia diffusa and Azadirachta indica are such herbs with antimicrobial, antioxidant and anti-inflammatory properties. In the present study, vaginal fluid samples from infected patients were collected and cultured using different media. Isolated pathogens were identified using 16S rRNA sequence. Four bacterial pathogens were isolated and identified. The pathogens identified were Aeromonas cavia, Lactobacillus, Staphylococcus aureus and Klebsiella pneumoniae. Anti-vaginal activity of the two herbs were analysed in an isolated pathogen. Maximum zone of inhibition was observed against S. aureus and Aeromonas caviae. The present investigation confirmed that, Boerhaavia diffusa and Azadirachta indica herbal extracts were able to control the vaginal pathogens without any side-effects.

2. **Dr. Suganya Vasudevan**, “Pharmacognosy Determination and in vitro Antioxidant, Anti-Inflammatory, Antimycobacterial Activity of Salt Marsh Plants: Sesuvium portulacastrum and Salicornia brachiata, The Journal of KING ABDULAZIZ UNIVERSITY: MARINE SCIENCES, <https://journals.kau.edu.sa> , Google Scholar, Impact Factor : 0.15, ISSN 10128840 , Volume 32, Issue 10.4197/Mar.32-1.1, Page No. 1-19.

Abstract:

Mangroves are trees or large shrubs which have special adaptations to survive in this environment and grow within the intertidal zone in tropical and subtropical regions. *Sesuvium portulacastrum* (seapurslane) is, herbaceous, perennial, dichotomous, halophyte fast growing plant that belongs to family Aizoaceae. *Salicornia brachiata* Roxb, is a halophyte, commonly known as sea asparagus widely used as food item in several countries. Then, In vitro studies like, antioxidant, anti-inflammatory and antimycobacterial assay was carried out. The IC₅₀ values of *Salicornia brachiata* and *Sesuvium portulacastrum* was found to be 288.166, 369.451 and 369.764 µg/ml for DPPH scavenging activity. The presence of various primary and secondary metabolites was revealed in the present study. It also showed the better in vitro activities and was the most active plants against MDRTB, MTB and H37RV strain. This study validates the medicinal use of plants in the treatment of TB which have promising effect against MDRTB, MTB and H37RV.

3. **Dr. Manikandan Ramasamy**, “Protective effect of *euphorbia thymifolia* and *Euphorbia hirta* against carbon tetrachloride-induced hepatotoxicity in wistar rats, Taylor & Francis Group Drug Development and Industrial Pharmacy, <https://doi.org/10.1080/03639045.2022.2122985> , Scopus, Impact Factor: 3.72 , Volume 48, Issue 8- 5 September 2022, Page No. 1 – 11.

Abstract:

Objectives: The present study aims to investigate the protective effect of *Euphorbia thymifolia* and *Euphorbia hirta* extracts on in vitro antioxidant activity and in vivo analysis on hepatic marker enzyme levels and histopathological changes in the liver of carbon tetrachloride (CCl₄) induced hepatotoxicity rats.

Materials and Methods: This study includes 42 adult male Albino wistar rats randomly divided into seven treatment groups, including control (basal diet, G1), CCl₄-induced single dose (1.5 ml/kg, i.p.) as the negative control (G2), G1 supplemented with 300 mg/kg of ethanol extract of *E. thymifolia* (G3), *E. hirta* (G4), G2 supplemented with 300 mg/kg of ethanol extract of *E. thymifolia* (G5), *E. hirta*

(G6), and silymarin (25 mg/kg b.w.) used as a standard drug (G7) for 21-days experimental period.

Results: The ethanolic extracts of *E. thymifolia* and *E. hirta* exhibited potential in vitro antioxidant activity in a dose-dependent manner (25 µg/ml, 50 µg/ml, 100 µg/ml, 200 µg/ml and 250 µg/ml). Oxidative stress caused by CCl₄-induced the liver damage, including changes in liver marker enzymes (aspartate aminotransferase, alanine aminotransferase, and alkaline phosphatase), enzymatic (superoxide dismutase and catalase), non-enzymatic antioxidants (lipid peroxides and glutathione) and hepatocellular alternations such as hydropic degeneration, irregular hepatocytes and distention of the vein. Administration of *E. thymifolia* and *E. hirta* significantly ($p < 0.05$) restored the enzyme activity along with the histology of the liver.

Conclusion: The results from the current study demonstrate that *E. thymifolia* and *E. hirta* have the property of restoring hepatic redox capacity and antioxidant activities against CCl₄-induced acute liver damage.

4. **Dr. Manikandan Ramasamy**, “Impact on cardioprotective effect of *Psidium guajava* leaves extract in streptozotocin-induced Wistar mice with molecular in silico analysis, Quality Assurance and Safety of Crops & Foods, <https://www.gascf.com>, Scopus, Impact Factor: 1.67, ISSN 1757-837X, Volume 15, Issue 2 – 27 April 20223, Page No.209-221.

Abstract:

Cardiovascular disease (CVD) and its complications have been regarded as the leading cause of morbidity and mortality. The drugs available in the market are effective to treat CVD, but with many adverse reactions. Nowadays, herbal products are the attention of researchers because of their less adverse effects. In this study, the cardioprotective effects of ethanolic leaves extract of *Psidium guajava* Linn. (Guava) (*P. guajava*) were evaluated in streptozotocin (STZ)-treated animal models. Mice acquired for the study were divided into five groups, each consisting of six mice. The toxin-induced mice were treated with the ethanolic leaves extract of *P. guajava* (300 mg/kg body weight [b.w.]). The results were compared to the standard

drug (glibenclamide)-treated mice (3 mg/kg b.w.). The following parameters were considered for further investigations: creatine kinase-muscle brain (CK-MB), creatine kinase (CK), troponin, lysosomal, and mitochondrial enzymes. Then the docking study was accomplished. The levels of cardiac marker enzymes and lysosomal enzymes increased significantly in the toxin-induced mice, while the level of mitochondrial enzyme decreased significantly. During treatment with the ethanolic leaves extract of *P. guajava*, the levels of all parameters were notably reversed to normal range ($P < 0.05$). Further, in docking analysis, the interaction of compounds, such as alpha-terpineol, cyclopentanecarboxamide, guaiol (a sesquiterpenoid alcohol), 1H-cyclopropanaphthalene, tetracyclotridecan-9-ol, dormin/abscisic acid, and epiglobulol, with the respective protein molecules, evidenced the cardioprotective effect of *P. guajava* leaves. Hence, it was concluded that the ethanolic leaves extract of *P. guajava* leaves have a cardioprotective effect.

1. **Dr. G. Dayana Jeyaleela**, “In vitro Pharmacological Activities of Delonix Elata Extract Mediated Zinc Oxide Nanoparticles”, Oriental Journal of Chemistry, <http://dx.doi.org/10.13005/ojc/380428>, Web of Science, Google Scholar, Publons, ISSN NO:0970-020 X, Volume 38, No. 4, August 30 2022, Page No. 1037-1046.

Abstract:

Bio resource based metal oxide nanoparticles has potential biomedical applications. In recent years lot of research is concentrated on the production of semiconductor ZnO nanoparticles through a greener approach. The present study is focused on the biosynthesis of ZnO nanoparticles from the ethanolic extract of Delonix Elata leaves. The preliminary phytochemical screening analysis was carried out for the ethanolic extract of Delonix Elata leaves. The biosynthesized zinc oxide nanoparticles were characterized using modern analytical techniques such as UV-Visible spectroscopy, Fourier Transform Infra Red Spectroscopy (FTIR), X-Ray Diffraction Analysis (XRD), Scanning Electron Microscopy Analysis (SEM) and Energy Dispersive X-Ray Analysis (EDAX). The antioxidant potential of the synthesized zinc oxide nanoparticles are investigated by DPPH free radical scavenging assay and anti-inflammatory activity by bovine serum denaturation assay. The outcome of the studies clearly showed that the zinc oxide nanoparticles synthesized from the ethanolic extract of Delonix Elata leaves have potential anti-oxidant and anti-inflammatory properties.

Dayana Jeyaleela**, “Inhibitory Effect of Basella alba-Mediated Zinc oxide Nanoparticles against the infection – causing Bacteria”, Biomedical and Biotechnology Research Journal (BBRJ), <https://www.bmbtrj.org>, Scopus, Web of Science, Volume 6, Issue 3, September 2022, Page No. 353-359.

Abstract:

Background: Naturally occurring biomolecules from the plant extract have been identified to play an active role in the formation of any nanoparticles.

Methods: This work aimed to synthesize the nano-sized zinc oxide material (zinc oxide nanoparticles [ZnONPs]) using the 70% ethanolic leaf extract of *Basella alba* by precipitation method and also studied the antibacterial activity of green-synthesized ZnONPs on infection-causing five bacteria. Synthesized nanomaterials were characterized by the aid of ultraviolet (UV)-visible, Fourier transform infrared spectroscopy, scanning electron microscope, X-ray diffraction, and Energy Dispersive X-ray Analysis (EDAX).

Results: Qualitative analysis and UV results of extract reveal the occurrence of some medicinally important phytochemicals such as flavonoids, terpenoids, phenolic acids, and ascorbic acid. The spherical nature of ZnONPs was observed with an average crystalline size of 28.64 nm. EDAX analysis revealed the elemental compositions in the *B. alba*-mediated ZnONPs (BA-ZnONPs) which showed zinc in 70.04% and oxygen in 29.96%. BA-ZnONPs were tested against the bacteria (an infection causing) such as *Pseudomonas aeruginosa*, *Escherichia coli*, *Enterobacter aerogenes*, *Staphylococcus aureus*, and *Proteus vulgaris*, which results that, against all the pathogens, ZnONPs showed noticeable inhibition effects compared with zinc acetate and *B. alba* extract. Especially against the *E. coli*, ZnONPs performed well with inhibitory effect and least on *S. aureus*.

Conclusion: Antibacterial activities of BA-ZnONPs were studied which can act as the new antimicrobial-resistant agents.

Abstract:

Background: The nature acts like a large “bio-laboratory” comprising plants, algae, fungi, yeast, etc., which are composed of biomolecules. These naturally occurring biomolecules have been identified to play an active role in the formation of nanoparticles.

Methods: This research work mainly aims to investigate the anti-oxidant (diphenyl picrylhydrazyl assay) and anti-cancer (Michigan cancer foundation-7 cell line) capacities of biologically prepared copper oxide mediated from the hydroalcoholic extract of *Justicia glauca* by simple precipitation and also to identify the phytochemicals in the extract by qualitatively.

Results: On screening test, the extract shows the presence of carbohydrate, phenolics, alkaloids, and terpenoids saponins which are chiefly act as a reducing, stabilizing, and capping agents in nanomaterial preparations. The medicinal plant *Justicia glauca* extract-mediated copper oxide materials were synthesized by lost cost, simple, effective, and eco-friendly precipitation method. The prepared copper nanomaterials were characterized by ultraviolet–visible, Fourier-transform infrared spectroscopy, energy dispersive X-ray analysis, X-ray diffraction, and scanning electron microscope. The obtained spectral results reveal that the prepared particles were found to be elliptical flat shapes of copper oxide with the average size of 19.72 nm with 51.11% of copper and 48.89% of oxygen elements. Especially, on anti-oxidant and anti-cancer activities the prepared *Justicia glauca* extract-mediated copper oxide revealed excellent potent while comparing the other green synthesized copper oxide particles.

Conclusion: Overall results evidenced that the aqueous extract of *Justicia glauca* is a very good bioreductant for the synthesis of copper oxide nanoparticles.

- 4. Dr. G. Dayana Jeyaleela**, “Anticancer Activity of Tin Oxide and Cerium – Doped Tin Oxide Nanoparticles Synthesized from *Ipomoea Carnea* Flower Extract”, *Biomedical and Biotechnology Research Journal (BBRJ)*, <https://www.bmbtrj.org>, Scopus, Web of Science, Volume 6, Issue 3, September 2022, Page No. 337-340.

Abstract:

Background: The aim of the study is to investigate the anticancer potential of tin oxide (SnO_2) and different concentrations (2%, 4%, 6%, and 8%) of cerium-doped tin oxide nanoparticles (Ce- SnO_2 NPs) using *Ipomoea carnea* flower extract. The synthesized SnO_2 and different concentrations (2%, 4%, 6%, and 8%) of Ce- SnO_2 NPs was tested using a colorimetric-based 3-(4,5-dimethylthiazol-2-yl)-2, 5-

diphenyltetrazolium bromide assay against MCF-7 human breast cancer cell line cells.

Methods: Collection and preparation of plant extract is preliminarily carried out followed by the synthesis of Undoped and Cerium doped Tin oxide nanoparticles is achieved by standard protocol along with that its anticancer activity also studied in this research.

Results: The anticancer activity increased in direct proportion to the cerium-dopant concentration. Experimental results demonstrated that 8% Ce-SnO₂ NPs exhibited a potential anticancer effect compared with SnO₂ and other concentrations of Ce-SnO₂ NPs.

Conclusion: According to the current findings, large-scale manufacturing of Ce-SnO₂ NPs might be recommended to have effective anticancer agents against breast cancer cell lines.

Abstract:

Communication of digital information becomes frequent nowadays, due to its fast access capability. A good range of technologies for end – to – end protection are needed to resist the safety threats in modern communication. High speed communication networks facilitate the straight forward and rapid mode of online information sharing with high data rates. But the channels which are used for data sharing aren't secure. The topic of knowledge security emerges in such scenarios. To realize this, different security methods are getting used in data communication. Cryptography is one among the favoured techniques, but the scrambled appearance of encrypted information can cause high probability of attacks. Hiding information during a cover is one among the alternatives to cryptography. The most objective of this study is to supply an overall idea about the favoured also as emerging data hiding techniques in spatial and transform domains. The wide selection of those techniques will provide an honest overview about current trends in transform domain steganography to the researchers who have an interest in steganography.

Abstract:

The foremost purpose of it demand bill is in imitation of provide a extensive comment of network security and cryptography, including precise deem to digital signatures. Network security yet cryptography is a subject even vast ranging to coverage in regard to whether in imitation of defend facts into digital structure then in conformity with supply protection services. However, a basic overview over network security and cryptography in digital signatures is then presented. The cause

about a digital symbolic letter is according to supply a potential because a nature in accordance with bound its identity according to a section regarding information.

Blockchain is broadly recognized namely a potential disruptive technological know-how so has won a whole lot popularity recently. Despite many pregnant results, the modern-day blockchain landscape is fragmented, within as many blockchain structures appear within silos. Interoperability will become an integral performance in imitations of facilitate broad blockchain receiving yet starts in conformity with attract attention between both industry then academia research. In this paper, we propose a hash characteristic are one on the close extensively – used cryptographic algorithms among block chain technology. They are cryptographic (but no longer encryption) algorithms so are designed in accordance with defend data integrity.

Vidhyalakshmi, Dr. M.A. Gopalan, “On Finding Integer Solutions to Non-homogeneous Ternary Bi-Quadratic Equation $5(x^2+y^2)-2xy=140z^4$ ”, International Journal of Engineering Inventions, <https://www.ijeijournal.com/impact.html>, Google scholar, Impact factor:6.7, e-ISSN:2278-7461, p-ISSN:2319-6491, Volume 11, Issue 8, August 2022, Page No. 01-04.

Abstract:

This paper concerns with the problem of obtaining non-zero distinct integer solutions to the non-homogeneous ternary bi-quadratic equation $5(x^2+y^2)-2xy=140z^4$. Different sets of integer solutions are illustrated.

38. Dr. S. Vidhyalakshmi, Dr. M.A. Gopalan, “On Non-homogeneous Ternary Cubic Diophantine Equation $w^2+5z^2-2wx-10zx=6x^3-6x^2$ ”, International Journal of Research Publication and Reviews, www.ijrpr.com, Google scholar, Impact factor:5.536, Volume 3, No. 8, Page No. 1308-1310, August 2022.

Abstract:

The non-homogeneous ternary cubic Diophantine equation $w^2+5z^2-2wx-10zx=6x^3-6x^2$ is analyzed for its patterns of non – zero distinct integral solutions.

39. Dr. S. Vidhyalakshmi, Dr. M.A. Gopalan, “On the Non-homogeneous Ternary Bi-Quadratic Equation $2xz(x-z)=y^4$ ”, International Journal of Research Publication and Reviews, www.ijrpr.com , Google scholar, Impact factor:5.536, ISSN NO:2582-7421, Volume 3, No.8, Page No. 187-192, August 2022.

Abstract:

This paper focuses on finding non-zero distinct integer solutions to the non-homogeneous ternary bi-quadratic Diophantine equation given by $2xz(x-z)=y^4$. Different sets of integer solutions are presented.

40. Dr. S. Vidhyalakshmi, Dr. M.A. Gopalan, “On Finding Integer Solutions to Non-homogeneous Ternary Bi-Quadratic Equation $3(x^2+y^2)-2xy=11z^4$ ”, International Journal of Novel Research in Physics, Chemistry and Mathematics, www.noveltyjournals.com , Google scholar, Impact factor:8.76, Volume 9, Issue 2, May-August 2022, Page No. 23-28.

Abstract:

This paper concerns with the problem of obtaining non-zero distinct integer solutions to the non-homogeneous ternary bi-quadratic equation $3(x^2+y^2)-2xy=11z^4$. Different sets of integer solutions are illustrated.

41. Dr. S. Vidhyalakshmi, Dr. M.A. Gopalan, “On Non-homogeneous Ternary Bi-quadratic Equation $11(x+y)^2=4(xy+11z^4)$ ”, Journal of Multidisciplinary Engineering Science and Research (JMESR), www.jmesr.co.uk, peer-reviewed, Google scholar, Impact factor:2.27, Volume 1, Issue 1, July 2022, Page No. 08-10.

Abstract:

This paper focusses on finding non-zero distinct integer solutions to the non-homogeneous ternary bi-quadratic equation $11(x+y)^2=4(xy+11z^4)$

42. Dr. S. Vidhyalakshmi, Dr. M.A. Gopalan, “General form of Integer Solutions to the ternary non-homogeneous cubic equation $y^2+Dx^2=\alpha x^3$ ”, International Journal of Research Publications and Reviews, www.ijrpr.com, [Google scholar](#), [Impact factor:5.536](#), ISSN 2582-7421, Volume 03, no 09 Page number 1776 – 1781, September 2022.

Abstract:

The purpose of this paper is to obtain a general form of non-zero distinct integral solutions of ternary non – homogeneous cubic Diophantine equation $y^2+Dx^2=\alpha x^3$ where α is a given non – zero integer.

43. Dr. S. Vidhyalakshmi, Dr. M.A. Gopalan, “On finding Integer Solutions to non – homogeneous ternary cubic equation $x^2-y^2+x+y=2z^3$ ”, International Journal of Research Publication and Reviews, www.ijrpr.com, [Google scholar](#), [Impact factor:5.536](#), ISSN NO:2582-7421, Volume 3, No. 9, Page No. 1786 – 1792, September 2022.

Abstract:

This paper concerns with the problem of obtaining non – zero distinct integer solutions to the non – homogeneous ternary cubic equation $x^2-y^2+x+y=2z^3$. Different sets of integer solutions are illustrated.

44. Dr. S. Mallika, Dr. S. Vidhyalakshmi, Dr. M.A. Gopalan, “On Finding Integer solutions to non-homogeneous ternary cubic equation $7(x^2+y^2)-6xy=11z^3$ ”, International Research Journal of Modernization in Engineering Technology and

Science, www.irjmets.com , Peer – Reviewed Journal, e-ISSN NO: 2582-5208, Volume 04, Issue 09, September 2022.

Abstract:

This paper concerns with the problem of obtaining non-zero distinct integer solutions to the non-homogeneous ternary cubic equation $7(x^2+y^2)-6xy=11z^3$. Different sets of integer solutions are illustrated.

45. Dr. S. Vidhyalakshmi, Dr. M.A. Gopalan, “On Finding Integer Solutions to Non-homogeneous Ternary Cubic Equation $3(x^2-y^2)+x-y=2z^3$ ”, International journal of Research Publication and Reviews, www.ijrpr.com , [Google scholar](https://scholar.google.com/), [Impact factor:5.536](https://doi.org/10.24396/ijrpr.v3i10.5336), ISSN NO:2582-7421, Volume 3, No. 10, Page No. 36-40, October 2022.

Abstract:

This paper concerns with the problem of obtaining non-zero distinct solutions to the non-homogeneous ternary cubic equation $3(x^2-y^2)+x-y=2z^3$. Different sets of integer solutions are illustrated.

46. Dr. S. Vidhyalakshmi, Dr. M.A. Gopalan, “On Finding Integer Solutions to Non-homogenous Ternary Cubic Equation $x^2+by^2=(m^2+bn^2)z^3$ ”, International Research Journal of Education and Technology, <https://www.irjweb.com/> , Peer Reviewed Journal, ISSN NO:2581-7795, Volume 05, Issue 10, October 2022, Page No. 22-29.

Abstract:

The purpose of this paper is to obtain different sets of non-zero distinct integral solutions of ternary non-homogeneous cubic Diophantine equation $x^2+by^2=(m^2+bn^2)z^3$. A few properties of interest are presented.

47. Dr. S. Vidhyalakshmi, Dr. M.A. Gopalan, “General form of Integral solutions to the ternary Non-Homogeneous Cubic Equation $x^2+y^2+xy+x-y+1=(m^2+3n^2)z^3$ ”, IOSR Journal of Mathematics (IOSR-JM), www.iosrjournals.org , e-ISSN :2278-

5728, p-ISSN :2319-765 X, Volume 18, Issue 5, Ser I (Sep – Oct. 2022), Page No. 29-33.

Abstract:

The purpose of this paper is to obtain a general form of non-zero distinct integral solutions of ternary non-homogeneous cubic Diophantine equation $x^2+y^2+xy+x-y+1=(m^2+3n^2)z^3$.

48. Dr. S. Vidhyalakshmi, Dr. M.A. Gopalan, “On finding integer solutions to non-homogeneous ternary cubic equation [$x^2+xy+y^2 = (m^2+3n^2)z^3$]”, Journal of advanced education and sciences, 2022, 2(4):28-31, www.dzarc.com/education, Google scholar, ISSN: 2583-2360, Issue: 21 Oct 2022, Page No. 28-31.

Abstract:

The purpose of this paper is to obtain different sets of non-zero distinct integral solutions of ternary non-homogeneous cubic Diophantine equation $x^2+xy+y^2 = (m^2+3n^2)z^3$. A few properties of interest are presented.

49. Dr. S. Vidhyalakshmi, Dr. M.A. Gopalan, “On the ternary non-homogeneous quintic equation $x^2+ky^2 = (p^2+kq^2)^n z^5$ ”, International journal of research publication and reviews, www.ijrpr.com, Google scholar, Impact Factor: 5.536, ISSN: 2582-7421, Volume: 03, Issue: October 2022, Page No. 1257-1260.

Abstract:

The ternary non-homogeneous quintic equation given by $x^2+ky^2 = (p^2+kq^2)^n z^5$, where p, q are non-zero integers and k is a non-zero positive square-free integer, is analysed for determining its distinct integer solutions. Also, a generation formula for the integer solutions to the given quintic equation, being given its particular solution, is illustrated.

50. Dr. S. Vidhyalakshmi, Dr. M.A. Gopalan, “On non-homogeneous ternary quadratic equation $5(x^2 - y^2) + 6(x + y) = 6z^2$ ”, International journal of research publication and reviews, www.ijrpr.com, Google scholar, Impact Factor 5.536, ISSN: 2582-7421, Volume: 3, Issue: November 2022, Page No. 95-101.

Abstract:

This paper aims at determining non-zero distinct integer solutions to non-homogeneous ternary quadratic equation $5(x^2 - y^2) + 6(x + y) = 6z^2$. Different sets of integer solutions have been presented through employing linear transformations.

51. Dr. S. Vidhyalakshmi, Dr. M.A. Gopalan, “On the pair of equations $N_1 - N_2 = k$, $N_1 * N_2 = k^3 s^2$, $k \geq 0$ and square – free”, International research journal of education and technology, <https://www.irjweb.com/>, Google scholar, ISSN: 2581-7795, Volume: 04, Issue: 11 November 2022, Page No. 21-26.

Abstract:

The thrust of this paper is to obtain many non-zero distinct integers N_1 and N_2 such that $N_1 - N_2 = k$, $N_1 * N_2 = k^3 s^2$, $k \geq 0$ and square – free. A few numerical examples are given. Some observations among N_1, N_2 are presented.

Abstract:

This paper concerns with the problem of obtaining non-zero distinct integer solutions to the non-homogeneous Quintic Diophantine equation with three unknowns given by $x^2 + y^2 - xy = 28z^2$. Various sets of distinct integer solutions to the considered quintic equation are studied through employing the linear transformations $x=u+v, y=u-v, (u \neq v \neq 0)$ and applying the method of factorization.

Abstract:

Peptic Ulcer Disease is a major complication among 10% of the human population. Management of this disease is a global issue and can be achieved by multiple therapies. Though this disease is treated with antibiotics, proton pump inhibitors, h2 blockers, antacids, and cytoprotective agents, which creates lots of side effects and microorganisms developed drug resistance. Andrographis echinoides is an herb traditionally and still in villages used for the treatment of various ailments. Antiulcer activity of this plant's whole part was done by making use of ethanol-induced experimental animals. SOD, GPx, GSH, CAT, and MDA were assessed using standard textual methods. Aqueous and ethanolic extracts of whole parts of this plant revealed 69.1-83% ulcer protection and restored the levels of gastric volume, gastric acidity, and gastric pH. Levels of antioxidant enzymes were also restored in control animals and omeprazole-treated animal groups. Phytochemicals like flavonoids, tannins, and phenolic compounds are essential in controlling ulceration and the free radical scavenging power of the plant materials and are confirmed as antioxidant and antiulcer agents.

Abstract:

Andrographis echioides is one of the stress tolerant plant that belongs to the family Acanthaceae commonly called as Kopuramthangi in Tamil, commonly found in central region of Tamilnadu, India. Local peoples used this plant for fever, to relieve griping, irregular stools and loss of appetite. Indian siddha and ayurvedic pharmacopeia provide standardization criteria for herbal drugs. The aim of the study is to provide quality standards for the powder drug from the whole plant of Andrographis echioides. In order to provide herbal standards for this plant, the present study was undertaken with the objectives to assess pharmacognostic, physiochemical and phytochemical markers of the drug powder of Andrographis echioides whole plant. Andrographis echioides whole plant was collected, authenticated and processed for all pharmacognostic activity using standard textual methods. Powder analysis showed the presence of calcium oxalate crystals, trichomes, fibres, vessel elements and parenchyma cells. The powder is yellowish green in colour with 3.6% ash value with higher water extractive (19.4%). Powder contains a smaller number of microbial flora and no pathogens detected. Multiple fluorochromes were detected in fluorescence test. The pharmacognostic results were within the limits of ayurvedic pharmacopeia of India. Whole plant powder showed the presence of terpenoids, flavonoids, Saponins, phenolic compounds and carbohydrates which could be responsible for all biological activities of the plant. Histochemical analysis also confirmed the availability of phytoconstituents like flavonoids and tannins. The observations made through this study would be of immense value in the pharmacological evaluation and standardization of crude powder of the plant materials.

Abstract:

The most common cause of death worldwide is now cancer, surpassing cardiovascular disease. The environment, way of life, genetics, and other factors are just a few of the causes of cancer. Many cancer patients seek alternative and/or complementary treatments due to the high death rate associated with the disease as well as the unfavorable effects of chemotherapy and radiation therapy. Traditional medicine began with the hunt for botanicals that could treat illnesses like cancer. Several of the plants used in traditional medicine contain different bioactive compounds that have therapeutic potential, making them valuable not just for treating illnesses but also for preventing them. The worldwide pharmaceutical industry has benefited greatly from the contributions of plants. In this review, we've put up a list of 8 medicinal plants along with the anticancer compounds they hold. Scientists interested in developing a safe and efficient plantbased cancer treatment can use this article as a starting point. This study will offer data in favour of using these therapeutic herbs in conventional cancer treatment.

Abstract:

Early life has increasingly been recognized as a time frame in which nutritional requirements rise and lifetime diet and lifestyle taste and preferences are founded, not just as an initial moment of opportunity for catch-up growth (Goldberg GR et. al. 2013) but also as a period in which nutritional requirements growth and long-term dietary interests are established. These practices can have an effect on the health status of teenagers and also coming generations (viner RM, 2013). The aim of the study is to assess awareness on the ill effects of street food among school students. Descriptive research design been used in this study. It is concerned with describing the social demographic characters along the economic, street food issues, spreads germs and bacteria, hygienic methods, and the problems related to consumption of street food among school students. The universe of the study is 9th standard boys and girls who are studying in private higher secondary school in Trichy. There are 124 boys and 86 girls who constitute the universe of the study. The researcher selected 50, 9th grade students for this study by using simple random sampling (lottery method). The research used self-prepared questionnaire covering their awareness on the ill effects of street food among school students. Major findings of the study is discussed in the full paper.

Abstract:

Covid-19 has created its impact in all walks of life, to prevent and control the spread of infection, social distancing lockdown, various other precautionary measures are also taken by the respective governments for the welfare and benefit

of the public. Education system underwent a drastic crisis during the lockdown period. Online classes by using internet facilities reached every corner of the country. It made the educational services possible during curfew. One of the major stakeholders of the educational services namely the teachers came across lots of stress and strain along with positive lessons during this period. Especially the teachers working in private school teachers faced challenges which they have never experienced before. Some of them given up their job and went for hunting other sources of livelihood and the remaining struggled to fulfil the family commitments as well as the problems of health, network/data issues, rural domicile and other academic related problems. This descriptive study is an attempt to know the problems and challenged faced by the school teachers during lockdown. A self-prepared interview schedule was used to collect details of socio-demographic condition, economic, social and health issues faced by the teachers along with the issues related to online classes taken under work from home criterion. Totally 50 teachers working in a Trichy based private school were taken as sample by using simple random sampling. The major findings of the study will be discusses in the full paper.

Abstract:

Since the dawn of time, women community had indeed been viewed as second-class citizens. In a male dominated society, hierarchical norms have mandated the dos and don'ts for women in every aspect of their life, from public behavior to reproductive decisions. Working women, that is, those who work for a living, encounter challenges at work just because they are female. The public perception of women's roles lags far behind the law. Gender discrimination is another issue that many women face at work. Though business workplaces are gradually closing the gender divide, private institutions and government offices

remain even further behind. Women in general find it difficult to distinguish between their personal lives and their successful jobs. For generations, women have been victims of men's power struggles. When communicating with co-workers, colleagues, and bosses, women in higher positions face the problem of ego clashes. This descriptive study on problems and challenges faced by working women was conducted among the women working in Trichy based printing press. 50 respondents were selected by using simple random sampling with lottery method. A self – prepared questionnaire was used to collect data covering socio-demographic variables, work place safety, problems encountered and their work life balance. The major findings of the study will be discussed in the full paper.

Dr.M.Usha Bharathi, “Exploring the theme of Human-Animal Kinship in Margaret atwood’s oryx and crake”, Shanlax International Journal of Arts, Science and Humanities, <https://shanlaxjournals.in/journals> , Google Scholar, P-ISSN No. 2320-2645, E-ISSN No. 2582-3531, Impact factor. 4.110, Volume 10, Issue 1, January 2022, Page no. 67-69.

Abstract:P

Oxyx and crake explored the theme of advancement of science and its challenges are distinct between human and animal. Atwood discusses the theme during a special way in her novel ‘Orxy and crake’ published within the year 2003. It deals with the protagonist snowman’s hindering mind about his past and annihilating present. The protagonist is revealed through his attitude with creature called ‘Crakers’ and his deportments throughout the novel. The most frightening thing within the novel is that the pigeons that jimmy’s father helps to make as a genetic engineer at the organ inc farms compound. The novel is setting by post-apocalyptic and narrates the story of mankind’s demise as results of a worldwide epidemic deliberately caused by the idealistic scientist crake. This novel highlights how the crakers, a scientifically created race meant to outpace humanity takes over man’s place.
